

WI-FI CONTROL DEHUMIDIFIERS
RESIDENTIAL WHOLE-HOUSE (GFI #5333 & #5334)
GENERALAIRE® MODELS DH75 & DH100
D E H U M I D I F I E R S

SINCE 1937, GENERAL FILTERS HAS PROVIDED NORTH AMERICAN HOMEOWNERS WITH THE FINEST INDOOR AIR QUALITY EQUIPMENT!

The Three Reasons for Whole-House Humidity Control

Humidity and our Health

- Too much or too little humidity can create optimum living environments for mold, mildew, airborne pathogens, and other factors that affect our respiratory systems. Mites and other pests also thrive in these environments that are often characterized as odorous. Too much or too little humidity can negatively affect our sinuses, skin, and overall health.
- Keep your home between 40% and 60% RH (relative humidity) and help eliminate these harmful conditions. Generate and maintain healthy living spaces through Whole-House Humidity Control!

Humidity and Household Comfort and Cost

- By maintaining a 40% to 60% RH living environment, you will help eliminate the discomfort of hot muggy days or bitter cold nights. You can reduce up to 5% of your home's energy cost by maintaining proper relative humidity levels. Keep it between 40% and 60% and turn the humidistat UP in the summer and DOWN during the winter with Whole-House Humidity Control!

Humidity and Household Assets

- Wood flooring, paneling, window frames, furniture, cabinetry, beams, musical instruments; leather furniture and clothing; clothbound books.... Expensive and often treasured assets all made from hygroscopic materials, or materials that will absorb humidity until saturated. Too much humidity and these materials will warp and lose their integrity. Too little humidity and they dry, crack, become brittle and lose their value. Keep your home between 40% and 60% and protect your precious assets with Whole-House Humidity Control!

THE DH SERIES OF WI-FI CONTROLLED DEHUMIDIFIERS

In the warm months, a dehumidifier will help maintain the 40-60% RH target while your home is active or while it sleeps! A whole-house dehumidifier pulls unwanted moisture from the air, reduces it to water, and drains it out of the house, thus eliminating a hot and clammy living environment.

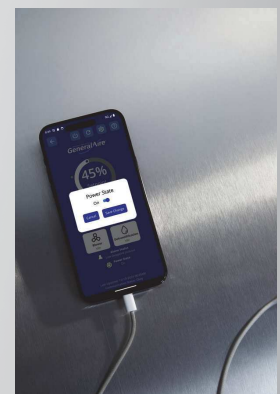

The DH75 and DH100's Wi-Fi capability allows this activity to take place whether you are at home or away on business or vacation. The monitoring and control of your home's relative humidity is available on your Smart device or laptop computer via the GeneralAire APP and internet availability.

Our new APP allows homeowners with multiple units in the house to monitor and control the dehumidifiers from a single device. For homeowners with multiple homes with dehumidifier installations, one APP now manages all units.

For service technicians, a single APP allows the service tech to monitor and control up to 50 installations on one device. Homeowners and service techs can partner to maintain proper humidity levels at all times and from anywhere Wi-Fi is available.

Other dehumidifier features include:

- The industry's only touch screen display board
- The fan-only function keeps air moving and fresh whether the unit is in dehumidification mode or not
- A filter hour indicator for timely replacement of the MERV 11 filter
- A humidity display offset to match other humidity measurement devices in the house
- The GeneralAire® TuffCoil™ designed to maximize performance while eliminating corrosive elements for long lasting coil life.

PRODUCT SPECIFICATIONS		
MODEL	DH75	DH100
CAPACITY	REMOVES 75 PINTS PER DAY	REMOVES 100 PINTS PER DAY
COVERAGE	FOR HOMES UP TO 3800 SQ FT	FOR HOMES UP TO 5200 SQ FT
CONTROL	WI-FI OR TOUCH-SCREEN	WI-FI OR TOUCH-SCREEN
POWER SUPPLY	120VAC, 60Hz	120VAC, 60Hz
OPERATIONAL INLET AIR TEMPERATURES	50F TO 90F	50F TO 90F
NOISE	LESS THAN 55dB	LESS THAN 55dB
WARRANTY	5 YEARS	5 YEARS
